## Reasons for Allowance

2. Claims 2 and 4 are allowable over the Prior Art of Record because it fails to teach or suggest a method for detecting a defect in a populated circuit board comprising the step of analyzing the obtained thermographic image by comparing with a standard thermographic image, wherein the standard thermographic image has been obtained by i.) subjecting the second side of the populated circuit board to a thermal wave from the heater array, applying said thermal filed until the surface of the populated circuit board reaches a predetermined transit temperature or said transit time period has elapsed, and ii.) taking said standard thermographic image once the said predetermined transit temperature is reached or said predetermined transit time period has elapsed in combination with the remaining limitations of the claims.

- 3. Claims 3 and 5 are allowable over the Prior Art of Record because it fails to teach or suggest a method for detecting a defect in a populated circuit board comprising the step of analyzing the obtained thermographic image by comparing with a standard thermographic image, wherein the standard thermographic image has been obtained by i.) monitoring the temperature of a surface of the populated circuit board, ii.) subjecting the second side of the populated circuit board to a thermal wave from the heater array, iii.) storing a first block of energy parameter information corresponding to the individual energy intensity of each heat source element, applying said thermal filed until the surface of the populated circuit board reaches a predetermined transit temperature or said transit time period has elapsed, and taking and storing a block of image information corresponding to said standard thermographic image in combination with the remaining limitations of the claims.
- 4. Claims 6 and 7 are allowable over the Prior Art of Record because it fails to teach or suggest a method for detecting a defect in a populated circuit board comprising the step of storing a first block of energy parameter information corresponding to the individual energy intensity of each heat source element, subjecting the second side of the populated circuit board to a thermal wave from the heater array comprising a plurality of individually controllable heat source elements, applying said thermal filed until the surface of the populated circuit board reaches a predetermined transit temperature or said transit time period has elapsed, and ii.) storing a block of image information corresponding to the second thermographic image, said
